OWAC, acronym for Open Water Company, is an engineering company that operates within the **ENVIRONMENTAL** sector developing circular economy initiatives that have true impact on people's lives and the Planet

Thanks to the expertise acquired for over two decades and our constant research for technological progress we have become a highly specialised engineering company when it comes to designing multifunctional industrial platforms. An **EFFICIENT WORKFLOW** that minimises indetermination margins is achieved by integrating different technologies, using advanced control systems and supporting interoperability during project development

WASTE TO ENERGY INTEGRATED PLANTS

Energy independency has become a major strategic factor for all nations. **WASTE TO ENERGY** industrial platforms support circular economy systems allowing the **UTILIZATION OF WASTE** and the recovery of secondary materials.

The transition to sustainability requires a **SYSTEMIC REVAMP OF DESIGN METHODOLOGIES**. The solutions adopted to encourage the development of such projects, lead to choices that take into account different elements such as combining the technical needs of production with the attentiveness towards the natural or anthropized surroundings.

THE USE OF THE BIM METHODOLOGY ENABLES A CONTINUED **CONTROL AND ANALYSIS** OF THE PROJECT'S LIFE CYCLES (LCA), FROM CONCEPTUAL PHASES TO MONITORING AND OPERATIONAL PHASES, DOWN TO DEMOLITION AND THE RECOVERY OF REUSABLE MATERIALS.

WHO WE ARE

OWAC is a leading engineering company specialised in waste treatment and **waste to energy plants**, environmental remediation, water treatment and renewable energy

Our services cover all project phases and its entire lifecycle

We use project management procedures integrated with BIM methodology and advanced monitoring systems to reduce risks and costs while securing quality control and complying with regulatory and legal requirements.

KEY NUMBERS

OUR CIRCULAR MISSION

OUR MULTIDISCIPLINARY TEAM

CUSTOMERS AND PARTNERS

KEY NUMBERS

We work within the environmental engineering framework and use cutting-edge technologies to develop **CIRCULAR ECONOMY** systems that aim to raise energy efficiency, integration and sustainability.

All our activities are oriented towards **ECO SUSTAINABLE PROJECTS** that contribute to reduce non recyclable materials, create value from recyclables and preserve the Planet.

OUR CIRCULAR MISSION

*“SOME CHANGES ARE SO
SLOW,
YOU DON'T NOTICE THEM,
OTHERS ARE SO **FAST**,
THEY DON'T NOTICE YOU”*

ASHLEIGH BRILLIANT

Think green_act circular, thoughts and actions walk together and reinforce each other to create a **NEW DEVELOPMENT MODEL** that holds the planet and human well-being at heart, and is in line with the sustainable goals set by the United Nations.

We recognize today's environmental problems and we believe in the need of a drastic mitigation of carbon emissions, the reduction of the exploitation of raw materials and the balance of environmental principles, The solution is a multidisciplinary approach that brings together innovation, entrepreneurial development and social responsibility.

The company's **AMBITION** is to support the development of a thriving sustainable world from an environmental, social and economic perspective.

OUR MULTIDISCIPLINARY TEAM

A constant approach towards innovation coupled with great teamwork has led to recognized excellency levels. Our most important resource to generate change is **PEOPLE**, their multidisciplinary skills and their energy.

OWAC is the acronym for Open Water Company. As stated by the Founder and CEO Rocco Martello: «Imagining vast and mutable horizons, such as the marine environment, trains us daily to solve problems dynamically, competently and flexibly, and prepares us to new learnings and to technological progress". We take great care of human capital and **SHARED KNOWLEDGE**, which, step by step and daily commitment, is transferred to others.

The international presence of the company and the ongoing relationship with research institutes, escalates continuous inhouse competences and strengthens the skills of external consultants, most of whom have been working with us for years.

Today, OWAC has over 50 specialised professionals that enable high quality results and provide customers **WITH PRIME SOLUTIONS AND DESIGNS**. An integrated workflow is achieved by using advanced technologies and interconnected digital solutions for data management

4 **Analisi del territorio**
L'analisi del territorio è un processo di studio e di valutazione del territorio in relazione alle sue caratteristiche fisiche, antropiche e socio-economiche. L'obiettivo è quello di comprendere le dinamiche del territorio e di individuare le opportunità e le criticità del territorio stesso. L'analisi del territorio è un processo iterativo e partecipativo che coinvolge diverse parti interessate e che si svolge in diverse fasi: dalla raccolta delle informazioni alla valutazione del territorio e alla proposta di interventi di sviluppo sostenibile.

5 **Strategie di intervento**
Le strategie di intervento sono le linee guida che orientano l'azione di sviluppo del territorio. Esse sono formulate sulla base delle conclusioni dell'analisi del territorio e tengono conto delle diverse dimensioni dello sviluppo: ambientale, socio-economico e culturale. Le strategie di intervento sono formulate in modo da essere coerenti con le politiche nazionali e regionali e con gli obiettivi di sviluppo sostenibile.

CUSTOMERS AND PARTNERS

To overcome new global challenges that require taking sensible and measured actions, we believe in **SYNERGIES** and international cooperation. This is why we have strengthened networks, agreements and important partnerships and work together with research institutions, universities and government agencies to daily and collectively build progress daily.

OWAC has an important bilateral agreement with the Sino-Italian Centre for Environmental Sustainability **SICES** in Shanghai, born from the alliance between the Italian and Chinese Ministries for the Environment, with the aim of promoting multilateral sustainable development projects.

We have established an operational office within the Tongji University of Shanghai.

With the University of Palermo (UNIPA) and the University of the South Pacific (USP) we are working on solutions to implement sustainable energy projects in the small Islands of the Pacific.

WHAT WE DO

We design sustainable, efficient and innovative solutions within the field of environmental engineering

Our waste to energy plants produce energy, enable the reuse of materials, reduce CO₂ emissions, and minimise waste to landfill

WHERE WE ARE
SERVICES
OWAC FOR **NRRP**
INNOVATION
BIM
CERTIFICATES

WHERE WE ARE

We are present in several countries where we collaborate with government institutions and local industry players.

OWAC has its headquarters in Palermo (Italy), and international branches in the United Arab Emirates (Dubai), and China (Shanghai). Advanced communication systems are used to guarantee performance and quality services.

With this in mind we have set up the OWAC Environmental Development Hub **OWAC_EDH**, to connect sector experts, research institutes and the best technology providers and address environmental issues transversally enabling a global approach to projects and research.

SERVICES

Our services cover the entire workflow required when implementing a project, **FROM CONCEPTION DESIGNS TO MONITORING DURING OPERATIONS**. We provide strategic advice to public and private clients for the development of strategies to solve large-scale environmental issues.

Constant innovation together with great teamwork enables us to achieve recognized levels of excellency.

WE LOOK FOR PEOPLE WHO BELIEVE IN **CHANGE**, WANT TO PARTICIPATE IN THE GLOBAL GREEN TRANSITION AND WHO WANT TO WORK IN SMART AND SUSTAINABLE MANAGEMENT OF RESOURCES.

OWAC FOR NATIONAL RECOVERY AND RESILIENCE PLAN (NRRP)

The NRRP recognizes the investments on infrastructure essential for the **DEVELOPMENT** and **COHESION** of all European member states, and provides unprecedented financial resources to be allocated to modernise and rebuild infrastructural assets. Consistent with the strategies adopted by the European Commission, the Plan encourages an integrated development approach that finds **synergistic balance** between the economic, social and environmental aspects, and the technical elements.

With this in mind, the entire system of waste collection, management, treatment, recovery and disposal has set new targets:

- reduce the production of waste at the source;
- implement and expand waste collection systems as well as to make them more efficient;
- improve recovery systems of waste materials;
- promote and make energy recovery systems from waste more efficient;
- minimise residual waste to send to final disposal (landfill)

The entire integrated waste management system therefore, is a clear example of applied circular economy and becomes a fundamental resource, in terms of material and energy recovery, that will benefit the same users who generate the waste.

PIANO NAZIONALE DI RIPRESA E RESILIENZA

#NEXTGENERATIONITALIA

 Italia
domani

Today, OWAC is developing projects within **NRRP** framework for several public and private clients, providing a wide range of integrated industrial platforms and solutions

Sistema Ambiente Provincia di Napoli S.p.A. (SAPNA) - Municipality of Tufino

Highly automated project for the modernisation of an existing platform with the integration of a new section of Organic Fraction of Municipal Solid Waste (OFMSW) for the production of quality compost and biomethane

Sistema Ambiente Provincia di Napoli S.p.A. (SAPNA) - Municipality of Giugliano

Highly automated project for the modernisation of an existing platform with the integration of a new section of OFMSW for the production of quality compost and biomethane

Agenzia territoriale della Regione Puglia per il servizio di gestione dei rifiuti S.p.A. (AGER) - Municipality of Lecce

Integrated anaerobic / aerobic plant for treatment of the OFMSW from separated waste and for the production of biomethane and quality compost

Acquedotto Pugliese S.p.A. - Municipality of Foggia

Biogas and biomethane production plant from biomass source (sludge from the biological purification process)

Salerno Pulita S.p.A. - Municipality of Salerno

Biogas production plant and treatment for the OFMSW

Asja Ambiente Italia S.p.A. - Municipality of Castellana Sicula

Waste to energy plant for the production of quality compost and biomethane from the OFMSW and valorisation of the residual fraction

Asja Ambiente Italia S.p.A. - Municipality of Mazzarrà

Sant'Andrea

Waste to energy plant for the production of quality biomethane and compost with material recovery from the treatment of urban waste

Asja Ambiente Italia S.p.A. - loc. Bellolampo - Municipality of Palermo

Waste to energy plant for the production of biomethane from the organic fraction coming from the plant of mechanical biological treatment of MSW and production of biomethane from the OFMSW deriving from the separated collection

ASIA Napoli S.p.A. - Municipality of Napoli

Highly automated plant with low human resources needed for the segregation, valorisation and recycling of waste paper and cardboard

Sistema Ambiente Provincia di Napoli S.p.A. (SAPNA) - Municipality of Caivano

Highly automated plant with low human resources needed for the segregation, valorisation and recycling of waste paper, cardboard and glass

INNOVATION

We adopt cutting-edge technologies that make our processes continuously more efficient

Technological innovation is one of our main levers to create value. Thanks to an innovative and standardised design methodology, we are able to meet high quality international standards.

To have an integrated design approach we use bim methodology, **DRONES AND LASER SCANNERS** for monitoring and surveying. Additionally, we use **DIGITAL TWIN** models for final design phases and work supervision.

Today, OWAC is one of the first companies certified in **UNI/PDR 74: 2019** for architectural design, structural and installation with methodology bim; the inhouse presence of bim managers, bim coordinators and bim specialists guarantees a well-equipped **BIM CERTIFIED TEAM** specialised on information digital process management, construction and modelling, in compliance with the **UNI 11337-7** standard.

OWAC has been certified **ISO 9001:2015, ISO 45001:2018** and **ISO 14001:2015** certified for project management services, civil and industrial projects with building information modelling methodology, construction management, design verification & validation process according to the current regulations.

Furthermore, the team holds **CERTING** certifications for "waste treatment and disposal - remediation projects - industrial wastewater treatment plants " and the team are recognized as national experts by **PDR/UNI 13:2019 - ITACA PROTOCOL.**

In line with the national industrial policy, which aims at providing substantial changes by encouraging investments in technological innovation, OWAC guarantees the digitization of production processes by foreseeing machinery and technologies are compliant with the provisions of the National Plan industry 4.0 approved on 21 September 2016.

Thanks to the **INTEGRATION** and **INTERCONNECTION** between subjects, machinery and devices, we combine physical and virtual worlds to use data and information efficiently, and allow the development of smart and fully digitalized models of production.

Building Information Modeling

BIM (Building Information Modelling) is an integrated method of work, supported by software, which allows the entire lifecycle of a project to be integrate in a single digital model, making the reports, designs, economic data, and contracts always available and interconnected allowing to **CHECK AND ANALYSE THE LIFE CYCLE** using intelligent models, from design to monitoring in the operational phases, up to demolition and recovery of reusable materials.

The adoption of the BIM methodology for the development of projects is increasingly required, sometimes mandatory. We use BIM with a **STRUCTURED APPROACH**, optimising internal design processes and execution of orders, ensuring a reduction of inconsistencies, costs and production times.

Thanks to an open platform for sharing the project and the collaborative interoperability methods, each figure involved has the necessary tools to plan, design and build more efficiently.

DUE TO THE BIM METHODOLOGY, OUR **WORKFLOW IS FULLY DIGITALIZED**, ENABLING US TO SPEED UP THE DESIGN PROCESS, CONSTRUCTION AND COMMISSIONING PHASES AND SUPPORT O&M, **REDUCING COSTS** AND UNPREDICTED SITUATIONS

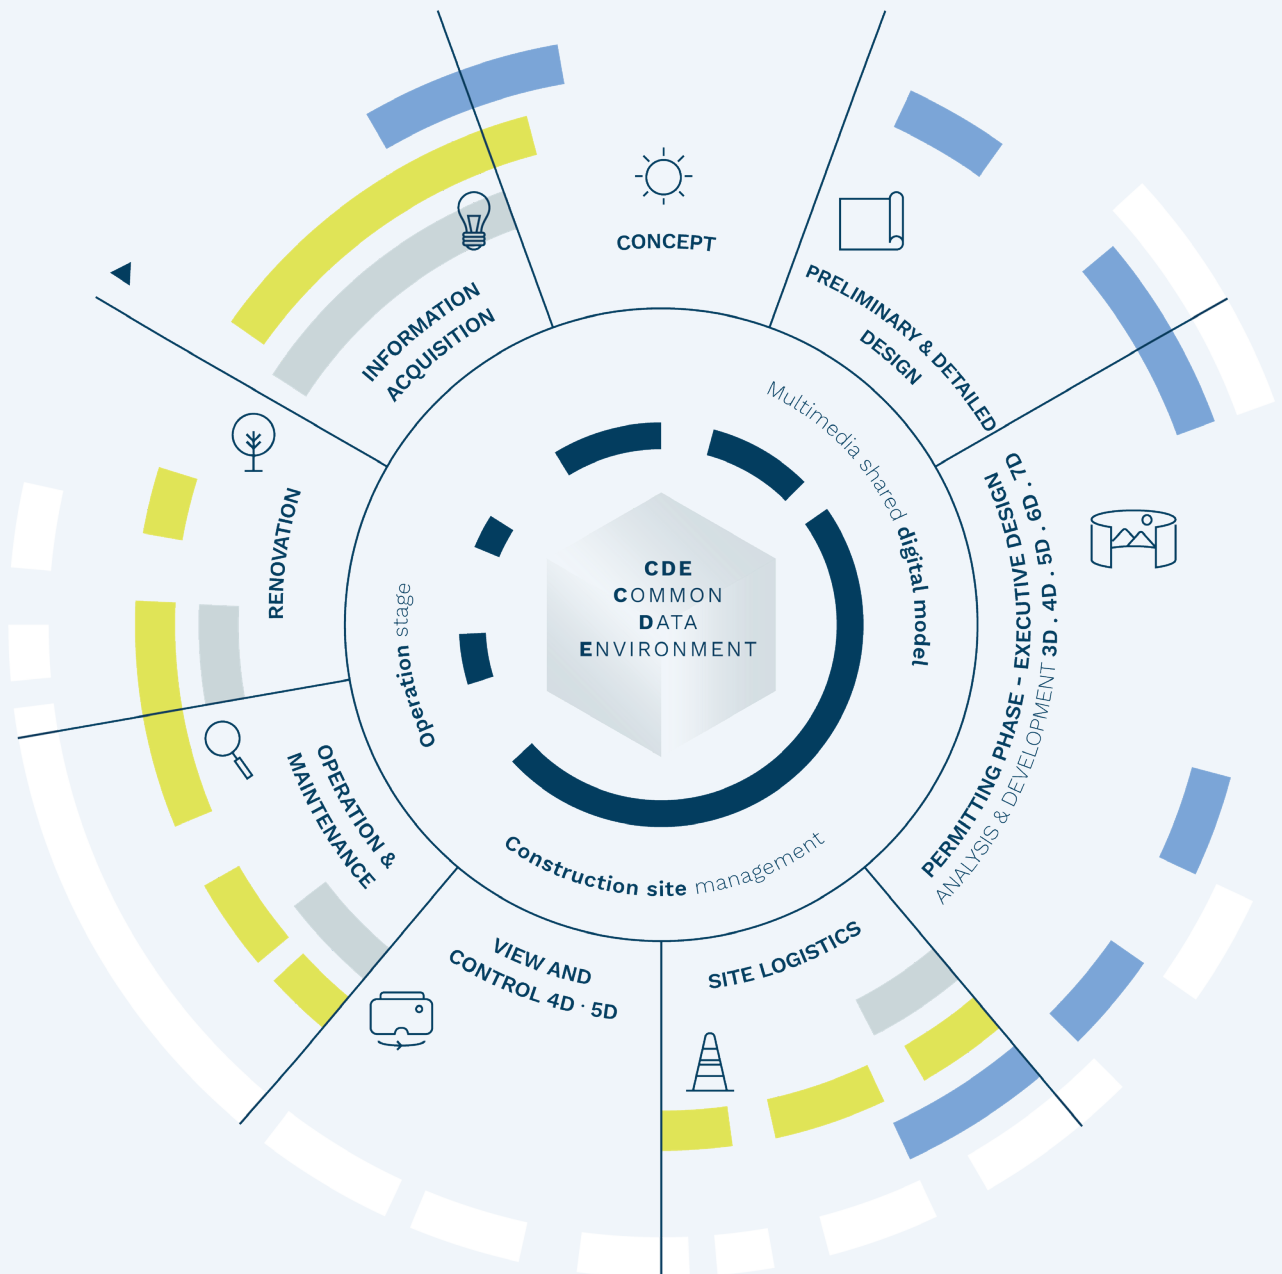

The use and integration of cutting-edge technologies, such as drones during surveys and monitoring phases and advanced control devices, such as virtual reality systems, allows us to **CUT DOWN THE MARGIN OF ERROR AND GUARANTEE THE REDUCTION OF MANAGEMENT COSTS.**

Our business-oriented approach and our trained multidisciplinary team enables the company to offer optimal solutions that meet market needs and respond effectively to current environmental concerns.

We guarantee a **COMPLETE AND CERTIFIED BIM SERVICE** within the digital information management processes, construction and BIM modelling, in accordance with the **UNI 11337-7 STANDARD.**
